

**RELEASED**

June 30, 2009

### **New Office Building for Slack & Co. Underway**

**Houston, TX**—Located at Highway 288 and Holmes Road, Slack & Co.'s new office building is currently under construction. Linbeck is the construction manager on this design-build job, and the architect is Michael Graham of Element Architects.

After breaking ground in late May, the job is continuing to run on or ahead of schedule. In June, the site work was completed by Slack & Co., and concrete poured by TAS Commercial Concrete Construction. The frame for the building has been erected and siding added.

Plans for the 22,000 SF building include space for individual offices and work areas, a fitness center, kitchen area, dining area, training facilities and conference rooms. The seven-acre site provides ample space for the growing company as well as a large yard to house its fleet of equipment and materials.

"Our current office has just enough space for us right now when you include the temporary buildings where our project managers, accounting team and human resources department office. The new building will allow us to all be under one roof which will promote a more cohesive work environment," says Jim Slack, Jr. president of Slack & Co. Contracting, Inc.

Slack & Co. has been in its current offices on South Main Street for 12 years. The decision to move forward with plans for the new building was spurred by the current economy, rather than deterred.

"Because times are slow for many in the industry, pricing for construction was very competitive, making it an opportune time to build," says Jim. "Thanks to the financial stability of our company, we are able to proceed confidently with this project."

Construction of the new Slack & Co. building is slated for completion at the end of the year.
